

Get the best performance and quality for your Web device !

Montpellier (France), April 16, 2009

FOR IMMEDIATE RELEASE

Pleyo unveils «**Origyn Production**», a comprehensive production platform to get the best performance and quality for every Web Device development.

Origyn Production provides manufacturers, software integrators, editors and operators with a comprehensive tool-chain and automated test environment to allow a quick, safe and efficient use of **OWB** (Origyn Web Browser), the best Webkit* open-source variation for Consumer Electronic devices.

Origyn Production provides:

- Automatic build
- Optimized porting delivery on-demand
- Automated testing (unit tests, standard conformance, performances)
- Quality control on-the-fly

Pleyo provides two versions of **Origyn Production** :

- an external platform, operated by Pleyo, as «Safe production» offer
- an internal platform, hosted by customer and updated by **Pleyo**, as «Bring it home» offer

This platform is synchronized on the public **OWB** roadmap, and on Webkit*.

This offer is based on a large and strong experience of tests, quality control and web-browser developments and integrations.

About OWB

*For the last years, **OWB** has built a reputation of a strong alternative to port WebKit on constrained or specific environments.*

***OWB** brings the whole WebKit power while reducing the hassle of porting and staying up to date, thanks to its unique **Origyn Web Browser Abstraction Layer (OWBAL)**.*

***OWB** v4 comes with the usual GTK and Amiga full-featured implementation, SDL sample implementation, Windows enabled, and now also provides a full QT implementation. It also brings a new control API, simplified and faster to enable in the target framework.*

***OWB** is available on **Pleyo**'s opensource forge : www.sand-labs.org.*

About PLEYO

***PLEYO** is an independent software editor, specialized on multi-device* end-to-end Web-based solutions.*

***PLEYO** is a Web-enabler for CE devices, providing an open-source embedded web-browser (OWB) and Web-services solutions.*

***PLEYO** also provides now a production platform for Web devices developments.*

More information at www.pleyo.com.

*Webkit is an Apple open-source project.
